March 2008

## **Voyager Connects 3 Primary Care Sites to Improve Patient Care**

Voyager Networks, the Unified Communications specialist has recently won a significant contract with Camden & Islington PCT to improve the performance of their IT Infrastructure, enabling them to deliver improved services to their patients. As part of the contract Voyager will replace the ageing data network with a fibre and Ethernet backbone, providing a high speed, scalable network to meet their future requirements.

The project, which is due to be rolled out over 60 sites, will involve St Pancras Hospital (SPH) which has historically been the old hub for Camden Primary Care Trust, Islington Primary Care Trust and Camden & Islington Mental Health & Social Care Trust (C&IPCT). Each trust is responsible for patients in their respective boroughs and cover primary and community healthcare services, mental health and social care services. Together SPH employs approximately 1900 staff including nurses, therapists, consultants, and support staff.

Voyager has been working with Camden & Islington for over 4 years having sourced, installed and managed their entire Cisco LAN and WAN Infrastructure previously. In March 2006, Voyager were commissioned to carry out a complete review of the current data infrastructure. Voyager suggested a complete redesign of their ageing campus style network, as it has evolved over the years as new technologies have emerged and business requirements changed. With the introduction of Integrated Voice, Data and Multimedia applications, it was soon apparent the existing infrastructure would not be suitable for their connectivity requirements.

In addition to their voice and data requirements, Camden & Islington required secure connectivity to the N3 network allowing them to benefit from future national applications. The end to end solution will further support the roll out of NHS IT systems such as Patients Care Records and Picture Archiving Communications.

Once the project has been completed Camden & Islington will have a modern, flexible and secure communication infrastructure that will be capable of supporting the needs of the organisation today and demands of the future.

For more information on this project or alternatively to discuss your requirements please contact Voyager Networks on 0870 1709700.

-Ends-
